

PLATFORD

C O R P O R A T I O N

MBX Systems 1101 Brown Street Wauconda, Illinois

MBX Systems had been a tenant in a Platford owned building for the last five years. Extreme growth of the company led MBX to purchase an existing stand alone building for their new headquarters. Platford was selected to provide the interior general contracting services.

After the existing interior was gutted with the exception of a few wall sections, Platford constructed a new 5,500 square foot office buildout. The sales area features exposed, painted ceilings and ductwork, and sections of upgraded acoustical grid and ceiling tiles at varying heights. A beautiful conference room with high end acoustical ceilings and a private office for the owner surround the sales area. These rooms were very important to the owner due to the lack of each in his former offices.

Almost half of the buildout features a production area for the technicians. Main features include patterned tile floors, extra light fixtures and specific electrical load requirements distributed to each work station.

The scope of the work also included the construction of a large kitchen/break room, washrooms, a server room, and a complete remodel of the existing 4,500 square foot warehouse. New light fixtures, painted walls, additional ductwork, epoxy coated floors and the installation of an additional overhead door helped make an old, dingy warehouse look brand new.
