C O R P O R A T I O N

**Harbortown Industries  
28477 Ballard Drive  
Lake Forest, Illinois**

*The first integral part of the construction process was to demolish the existing 6,000 s.f. office portion of the building and construct a new, two-story, 12,000 s.f. office and show-room that connected to the warehouse using heavy gauge steel framing and E.I.F.S. material.*

*Platford also handled the overhaul of the warehouse, designing new layouts for the racking and production lines, as well as installing the necessary electrical lines, compressed air lines, lighting, HVAC and exhaust ductwork.*

*The final tasks of this project included the repaving of the employee parking lot and the shipping/receiving lot. The entire site was then newly landscaped.*

*In 2000, we were faced with necessity to vacate our former facility and relocate to a new larger facility. We purchased an existing building but needed to make changes and additions to the structure. We hired Platford Corporation for this project and are very pleased with the outcome. We have received many positive compliments on the quality of our project. We are extremely pleased with Platford's performance and would not hesitate to hire them again, or recommend them to others for future Construction projects."*

*— Terry Rozdolsky  
President, CEO*
